Application
Development

We transform your visionary ideas into real-world solutions, tailor-made to meet your business needs. Our commitment to excellence is unparalleled, encompassing a range of cutting-edge technologies and creative expertise.

Applications

From custom solution development to an array of applications like web portals, mobile apps, chatbots, and more, we've got you covered. Our robust back-end solutions lay a solid foundation, ensuring your application runs seamlessly and reliably.

Development

Our front-end development team is here to craft engaging user experiences that turn your users into active participants in your digital journey. We don't just build apps; we build relationships and connections.

Global market

We stay ahead of the curve, integrating cutting-edge tech to create seamless applications that set you apart in the global market.

Case Study | Application Development

Industry: Shipping

Products & Services: Container Shipping, Logistics, Leisure

Solution

- Implementation of a system to reduce the line managers' workload by 50% and improve the quality and timeliness of data collection so that the company can act upon it.
- The cost savings for a global shipping operator are enormous as assumptions for cargo weight & port weight comparisons need to be accurate to avoid costly shutout periods.
- The system should generate multiple reports and an automated Coastal Capacity Alert to avoid last-minute issues and manual user intervention.

Technologies Used

Microsoft .NET   SQL   Microsoft .NET ASP.NET | MVC | Web API   B Bootstrap   jQuery write less, do more.   APACHE CORDOVA   A

Client Challanges

- The client wanted to reduce their manual input workload by 70%.

Business Value Added

- State-of-the-art technology ensures the system is both cost- effective and robust.
- Accessibility using mobile devices - since the workforce is global and mobile.
- Electronic lodging of capacity allocation, which increased visibility of its container booking and allocation operations
- Our solution works for both data processing & management information systems
- The solution integrates with existing systems - since security and data integrity were essential components.

Case Study | Application Development

Industry: Trucking, Automobiles, Heavy Equipment

Products & Services: Compactors, Demolition Equipment, Dumpers, Trucking, Material Transfer Vehicles etc.

Solution

E-Commerce B2B standard solution developed on .NET Framework hosted on Azure cloud hosting.

Technologies Used

Microsoft .NET

Microsoft .NET
ASP.NET | MVC | Web API

Project Challenges

Customizing of the product according to the complex requirements and usability enhancements. Sign-off and User acceptability.

Business Value Added

User-friendly UI, quick part browsing for dealers, very fast order processing for HUBS.
Order Portal accessible for dealers from multiple countries
(like Singapore, Malaysia, Indonesia, Australia, etc.).
